

Technical Specifications

Lightwave: UV-C primarily in the 222nm wavelength Power: 220-240VAC, 50/60Hz UV intensity inside: 90,000 µw/cm² Bulb lifespan: 8 000 operational hours Ballast lifespan: 20 000 operational hours Bulb length: 317mm Power of bulb: 24 watts * 2 pieces Filter: HEPA (H13/14) Efficiency: 99.995% @0.3µm Net weight: 18 kgs Air flow rate: 200 CFM Noise level: 55±5dB

Features

- > Touch control panel
- > Wireless remote control
- > Measures: 890*75*1500mm
- ▷ Effective up to 1000 sq.ft.

MEDICAL GERMICIDAL

AIR STERILIZATION UNIT

Model: SM 88

Filters:

- HEPA(H13/14)
- Activated carbon
- PCO with nano TiO₂

Note:

Europe's H ratings should not be confused with U.S. MERV ratings. The HEPA H13 and H14 in Europe is approximately equivalent to a MERV 17 or 18 in the United States

The best way to mitigate against airborne viruses, yeast, fungi, bacteria and mold

What UVGI / UVC technology can do:

Scientific evidence confirms that Clostridium difficile, MRSA, VRE, Acinetobacter baumannii, and influenza are transmitted via environmental surfaces.

Studies indicate that only 50% of environmental surfaces in a typical operating room suite or patient room care in hospitals are effectively disinfected.

Hence a patient's risk of contracting a Hospital Acquired Infection (HAI) from contaminated surfaces increases when the previous room occupant was infected.

- Mobile ultraviolet light (UV-C) unit significantly reduces aerobic colony counts and C. difficile spores on contaminated surfaces in hospitals.
- System for clinical & domestic applications to perform a proper air and surface sterilization against microbial contamination.
- Effective in the eradication of dust mites and bed bugs when used periodically.
- Prevention against indoor air contamination such as bacteria, mold, yeast and fungi.
- Decontamination of patient rooms, hotel rooms, meeting rooms etc... using an automated mobile UVC Light Unit.
- Short wavelength sterilization method to break down microorganisms in food and water.
- Variety of applications, such as food, air and water purification.
- UV radiation destroying nucleic acids in organisms to destroy their DNA.
- Deadly effect on micro-organisms, pathogens, viruses and molds.
- Sterilize drinking- and wastewater.
- Air sanitization and purification.

Food Storage Areas Kitchen

Class room

Benefits:

Minor OT theatre

Office

- -Effective in the mitigation against virus ie COVID-19, Tuberculosis, MRSA, H1N1 and other airborne cross contamination.
- Eliminates 99.9% of virus, bacteria, yeast and mold problems found in hospitals, schools, food processing plants and offices.
- Recommended by medical experts.
- Eliminates odours and neutralizes the air.

Reception area

Applications and locations where to implement :

- Clinical environments such as clinics, hospitals, dental surgery, schools, holding facilities, hospital reception area, wards, minor OT, X ray room, CT scan room, dialysis center.
- Food processing plant and food storage facilities (cheese, wine, vegetable, fruit, meat, etc..).
- Office, open office concept, bank, beauty saloon,
- Laboratories, testing facilities and diagnostic screening centre that require a clinically clean environment.
- Colleges, kitchen, hall, class room, eating centre.
